

GUIDELINES FOR AUTHORS

The Journal is indexed in the Elsevier Science Excerpta Medica Database.

Manuscripts submitted to the Journal are peer-reviewed.

Single submission: Please do not submit your paper to us if you plan to simultaneously submit it to other publications.

Original and Emailed copy: Please email your manuscript and mail a hard copy also.

Length: Minimum: 10 double-spaced pages, including title page, abstract, tables and end references. Maximum: 30 pages

Grammar and Spelling: Please reread your paper for grammatical and spelling errors before submitting it to the Journal. In addition, we ask that journal submissions be professionally edited before submission.

Research Papers: Papers in this class should exhibit considerable research and rigorous scientific thinking. They should evidence the objective of the study and the population studied, outline the methodology, describe the instruments used and provide results and discussion.

Other Papers: A diversity of other papers in the area of forensic psychiatry and psychology are also welcome. These include clinical case reports; review of expert court testimony; personal essays and opinion papers. Since we are a forensic journal, it is expected that papers submitted will reference legal issues. Excerpts of expert testimony are accepted. Psychiatric/psychological reports and other protected documents should be thoroughly fictionalized before submitting.

Tables: Tables are the author's responsibility. They must be sized to fit the journal page of 4 3/4 inches wide by 7 1/4 inches long.

Abstract: A 100-200 word abstract must accompany the paper and include the objective of the paper and, if a scientific paper, a concise description of the methods, results and conclusions.

Capitals and Numbers: Do not capitalize any letters other than first letter of the first word in a sentence, the first letter of a proper name, acronyms (ANOVA, PTSD), manuals (DSM-IV), first letters of each word of book titles or diagnostic inventories or scales (Mississippi Scale for Combat-Related Posttraumatic Stress Disorder). Do not capitalize diagnostic disorders (borderline personality disorder). Use numbers for percentages (20%) for more than nine entities (12 patients). See section below on referencing.

International Authors: The Journal occasionally receives papers with excellent content but in unacceptable written English. In these cases, we will request that the author have a native English or American colleague rewrite the paper and then resubmit it.

Editing: If the paper should require excessive editing, the author will be contacted and asked to spend more time on the paper or to engage the services of a professional writer.

Property: The submitted paper becomes and remains the sole property of the Journal at the time of publication. The Journal reserves all rights to reproduce or to permit reproduction of the published paper.

Biographical Information: Please enclose a brief biographical paragraph, which will be printed with your paper.

Galleys and Reprints: The senior author will receive galleys to permit necessary corrections (not lengthy rewrites). A reprint order form will be sent with the galleys.

Citing and Referencing: Even the most original paper will contain a reasonable number of scholarly references. Some of these references will trace chronologically earlier work by scholars who have contributed to the subject area. These contributions will be recognized in the introductory portion of the paper, even if discordant with the author's viewpoint. The personal essay and opinion paper, as well, are expected to reflect outside reading and referencing. Papers not bearing any references are likely to be rejected.

Citations are the numbers placed in the text of an article, which correspond to the references that appear at the end of the paper. Three examples:

...empathy is fundamental to the emergence of certain essential transferences, the evolution of which is necessary for the curative force of that treatment approach (2)

...the empathic approach furthers the development of the therapeutic alliance (5).

It is known, for example, that women experience cutaneous drug reactions twice as often as men (20).

References corresponding to the above citations appear at the end of the paper and are styled as follows:

Books:

2. Kohut H: The Analysis of the Self. New York, International Universities Press, 1972

Journal articles:

5. Baker HS, Baker MN: Heinz Kohut's self psychology: an overview. Am J Psychiatry 1987; 144:1-9

Book chapters:

20. Wintroub BU, Shiffman, NJ, Arndt KA: Adverse cutaneous reactions to drugs, in Dermatology in General Medicine. Edited by Fitzpatrick TB, Eisen AZ, Wolff K. New York, McGraw-Hill, 1979

Legal references:

Johnson v. District Court of Oklahoma County, 738 P. 2d 151 (Okla. 1987)

Finkelstein v. District of Columbia, D.C. Superior Court, No. 486-86, Sept. 15, 1987
